

4. ADVANTAGES & DISADVANTAGES

4.1 Advantage

MyHealthHub keeps patients connected to their loved ones and enables virtual care in hospital rooms. By engaging patients, it eliminates many administrative tasks for care providers and reduces the chances of readmission. It's help for public .patients are less sick and do not stay overnight. You should schedule an appointment to visit your doctor at the clinic. Some reasons to go to a clinic or Doctor's office to see your Primary Care Provider/Doctor are: Routine medical appointments.

4.2 Disadvantage

There can be technical problems with the equipment used for telemedicine. Telemedicine may not be available to all patients due to limited access to technology. There may be inequitable access to telemedicine if it is only available to patients who can afford it. The system will dumbly record everything. The patient coughs or strains on the bed pan, and the system records a peak blood pressure of 300 mmHg. Susceptibility to attack - the CIS can be compromised by accident or through malice, as any other database can.

5. APPLICATIONS

There are so many learnig institutions here, most of them are there to make profit andnot to teach, they don't care about the students. Our Educonnect learning center aims to solvethis problem and provide good and useful education to students in a great way and help them to achieve their goals.

6 .CONCLUSIONS

A case report ends with a conclusion or with summary points, depending on the journal's specified format. This section should briefly give readers the key points covered in the case report. Here, the author can give suggestions and recommendations to clinicians, teachers, or researchers

7 .FUTURE SCOPE

With the help of a variety of cutting-edge technologies, such as telemedicine, electronic medical records, home-based care transitioning from hospital-based care, drone technology, genome sequencing, digital tools, and artificial intelligence (AI), the healthcare sector has been transforming drastically
